JULY 2025**

FUSION ARROW

TIGHTER GROUPINGS | FEWER DEFLECTIONS | PRECISE FLIGHT

Elevate your game with the most aerodynamically advanced Integrated Flight and Shaft – the Fusion Arrow. Using proven technology developed over centuries of warfare, the Arrow has been designed with a narrower wing width providing less drag, much like the flight control surfaces that balance traditional arrows. The parabolic curve profile improves the landing angle of this flight, resulting in flatter trajectory, faster flight and a more stabilised point of impact.
